This map was developed by the West Virginia Department of Transportation (WVDOT) Strategic Performance Management Division, in cooperation with the U.S. Department of Transportation (USDOT) and the Federal Highway Administration (FHWA). It was developed for use by the Highway Safety Improvement Program (HSIP) Program and was produced using Esri’s ArcGIS software. The primary source data for this map are 2010 National Hydrography Dataset (NHD) data and WVDOT Bureau of Traffic Safety State Wide Data System (SWDS) data. This data represents the actual conditions as of the time this map was produced. The data used to produce this map are as current as possible, however, due to the nature of the data, changes may occur which may be reflected in future updates. These changes may include new or improved roads, intersections, sidewalks, traffic operations and other elements critical to safety. For this reason, WVDOT recommends that end users verify the location of current or intended changes against actual conditions. The design and/or construction of new or improved facilities may result in future changes to the map. This is a draft version and should not be used for legal purposes.
